

“Environmentally friendly since 1891”

Despite nationwide recycling efforts, the average amount of municipal solid waste each person creates has doubled from 2.7 # per day in 1960 to 4.4 # per day in 2006 according to the EPA.....that’s 251 million tons!!

(See: www.epa.gov/epawaste/consERVE/rrr/reduce.htm for ideas on how to further reduce your carbon footprint through source reduction and recycling).

North American containerboard industry recycles 70% of its products. The Mason Box Company goes one step further and uses 100% recycled paperboard of which at least 90% is from post-consumer sources such as office paper and newspapers. Additionally, Mason Box Company seeks out vendors who actively reduce their carbon footprint.

Mason Box Company is serious about its commitment to the environment.

100% Recycled Board (90% Post Consumer)

Mason Box uses only paperboard that comes from otherwise landfill intended sources; (40% mixed office paper; 20% old corrugated boxes; 30% newspapers).

Water Based Acrylics

No solvents with volatile organic compounds

Repulpable Adhesives

Helps recycle the entire package...no stickiness

Recyclable Adhesives

Energy savings...hot melt requires 350 degrees

Biodegradable Adhesives

Processed natural gelatin requiring only 150 degrees

Linseed Oil Based Inks

No petroleum and/or rubber based inks

Continuous improvement initiatives make Mason Box a leader in efficient, environmentally friendly, custom rigid boxes. Experts in packaging design, Mason Box can fulfill your every packaging requirement while also helping you maintain a carbon footprint of which you can be proud.
